## Work Experience

Nov/24–Now

**Optimile**
Backend Software Developer · Ghent

- Integrate external services into the company's back-office system (APIs, data flows, Django backend components).
- Contribute to new features and improvements for the EV charging point management system.
- Set up and maintain roaming connections with other charge point operators so customers can charge on partner networks.
- Implement and maintain interoperability with charging stations from different hardware manufacturers.
- Provide technical support on the backend side for charging station issues (diagnosing, fixing or escalating backend-related problems).
- Maintain REST APIs and AMQP queues for EV charging protocols (OCPI, OCHP, OICP), and debug infrastructure issues to ensure global platform reliability.

Java · Django · Python

Jun/24–Oct/24

**Ag Solution**
Full-Stack System Engineer · Antwerpen

Developed enterprise industrial software; implemented security infrastructure and multi-platform deployments.

.Net · Angular · Savigent

Apr/24– Jun/24

**Tryve EU**
Software Engineer Intern · Antwerp

- Developed TaskTrove, a mobile app integrating with monday.com and Tryve's Location Toolkit.
- Enabled real-time location tracking and location-based task assignment for field technicians.
- Implemented secure authentication using monday OAuth with GDPR-compliant data handling.
- Added geofencing reminders, customizable tracking, and offline support for reliability.
- Designed intuitive map-based task visualization for project managers.
- Enhanced field productivity through seamless task coordination and live updates.

React Native · Expo · Express-js
